The new Glen site is enhancing our care activities thanks to cutting-edge equipment and state-of-the-art facilities that have been carefully planned and selected with our staff. Ambulatory care activities for adults are carried out in modular and flexible spaces to support best practices and facilitate care delivery to our patients.
THE VARIOUS AMBULATORY CARE SERVICES ARE LOCATED ON THE LOWER FLOORS OF THE GLEN SITE TO PROVIDE OUR PATIENTS AND THEIR FAMILIES WITH QUICK AND DIRECT ACCESS.

- The preoperative and surgical clinics are grouped on Level S1 of Block D
- Cardiovascular care activities are located on the ground floor of Block C
- Medical clinics and Medical and Immunodeficiency Day Hospital are consolidated on Level 2 of Block D

Located at the heart of the complex, all of these activities have direct access to key services:
- Emergency Department
- Test Centre
- Medical Imaging
- Cardiac Diagnostic Services
- Pulmonary Ambulatory Clinic
- Pediatric Ambulatory Activities

Easy to locate from the atria and public spaces, each module promotes fluid traffic flow with separate entrances and routes for patients and staff.

- Decentralized admitting stations to facilitate patient flow
- Two units located on either side of the block, each of which includes a good number of exam and procedure rooms and work areas
- Spaces laid out in a service corridor design to group activities from the same specialty and make it easier for patients and staff to get around
- Standardized room size for multiple uses and maximum flexibility
- Two team rooms for staff
- Offices and workstations located away from appointment areas
LOCATED ON THE GROUND FLOOR OF BLOCK C, CARDIOVASCULAR AMBULATORY SERVICES HAVE UNRIVALLED VISIBILITY FROM THE MAIN ADULT CARE ATRIUM.

The clinic includes the following services:

- Cardiac Surgery
- Vascular Surgery
- Cardiology
- Heart Failure Clinic
- MAUDE Unit (McGill Adult Unit for Congenital Heart Disease Excellence)
- Ultrasound
- Infusion Stations

A DESIGN THAT SUPPORTS OUR BEST PRACTICES

- Unit-based layout for greater flexibility and simultaneous use by different-sized clinics
- Spaces laid out in a service corridor design to facilitate the movements of our patients and staff
- Administrative spaces grouped at the centre of the department
- Infusion stations located away from main traffic areas for a more peaceful atmosphere
- Standardized room size for multiple uses and maximum flexibility

Medical Clinics

- Chronic Kidney Disease Educational Centre and Medical Ambulatory activities
- Centralized admitting station with a large waiting room
- Clear traffic flow for patients and staff
- Large team room available for multidisciplinary case review and teaching
- Design that promotes flexibility thanks to standardized rooms and shared spaces among different specialties
- Locker room for staff
Day Hospital
(Medical and Immunodeficiency)

Located a stone’s throw away from the medical ambulatory clinics and the test centre, the Day Hospital consolidates medical and immunodeficiency care activities.

- Treatment rooms divided into two service corridors
- Caregiver stations located centrally to maintain good patient visibility
- In the medical sector, doctors’ offices are located in front of the exam rooms
- In the immunodeficiency sector, single-patient treatment stations can be partially closed off with doors or curtains to help maintain privacy and confidentiality
- The close proximity of work spaces for nurses and doctors promotes collaboration and teamwork
- Spaces receive an abundance of natural light
